

Mass Fusion Splicer

90R16

Designed to keep you going

Mass Fusion Technology

The 90R16 mass fusion splicer has a wide heating area for up to 16 fibers. The wide electrode gap melts the fibers uniformly and has real-time arc discharge control by analyzing the arc's brightness intensity. The 90R16 does not have active core alignment mechanisms, however, during the discharge, fiber surface tension effects minimize preexisting offsets.

Analyzing arc power by observing the brightness intensity

Advanced Innovation

Replaceable V groove

The 90R16 mass fusion splicer includes a spare set of 16 fiber V-grooves with electrodes installed and ready to splice as part of the standard package. These spare V-grooves are field replaceable, so your downtime is minimized.

Universal Features

1. Universal Fiber Holder

The FH-70-16 fiber holder is compatible with many types of 16 fiber ribbon, such as 0.3mm or 0.4mm thick encapsulated ribbons and 200 μ m or 250 μ m coated Spider Web Ribbon (SWR). The 250 μ m pitch V-grooves in the FH-70-16 fiber holder simplify SWR loading and ribbon preparation.

2. Universal Ribbon Stripper

The RS series ribbon strippers are compatible with 200 μ m to 400 μ m coated fibers without replacing the stripper blades.

3. Universal Tube Heater

The 90R16 mass fusion splicer can accommodate a max 6.0mm diameter heat sleeve before shrinking. As a result, it supports a wide range of protection sleeve sizes.

User Friendly

1. Automated Functionality

The automated wind protector and heater clamps support the operator in completing the entire splicing process with minimal manual steps.

Automated open-close Wind protector

Automated Tube heater clamp

2. Simple sleeve centering

The 90R16 mass fusion splicer features simple sleeve positioning with its designated centering area on top of the tube heater.

3. Carrying Case

There are multiple ways to utilize the 90R16 carrying case. The 90R16 is ready to use just by opening the case, but it is also possible to use the 90R16 on top of the carrying case or only with the work tray depending on the work environment.

4. Work Tray

The newly designed work tray has many functions. There are two drawers for storage, and the drawers are large enough to store tools or battery packs. Also, the work tray can be divided in two, so it is configurable to fit your work space.

Active Blade Management Technology

1. Automatic Blade Rotation

The 90R16 fusion splicer and CT50 fiber cleaver are enabled with wireless data connectivity. This capability allows automatic cleaver **blade** rotation when the splicer judges the blade is worn. Also, the 90R16 fusion splicer can connect to two CT50s and RS03 simultaneously.

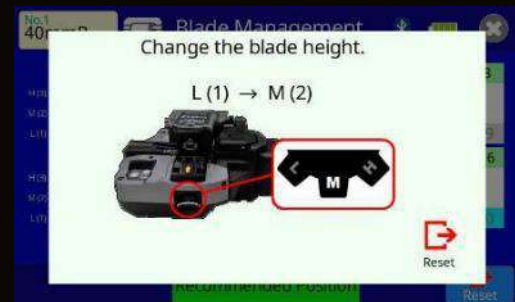

2. Blade Life Management

The 90R16 fusion splicer displays the remaining blade life and informs the user when a blade height change, position change, or new blade is required.

3. Stripping Condition Control

When the user changes the splice mode, e.g. from 16 fiber ribbon splice mode to SWR fiber splice mode, the ribbon stripper RS03 automatically changes its heating temperature and time with a wireless command from the splicer.

Heat temperature changes in accordance with Splice mode

Notes

- *1: Measured with a cut-back method relevant to ITU-T and IEC standard after splicing Fujikura identical fibers. The average splice loss changes depending on the environmental condition and fiber characteristics.
- *2: Measured at room temperature. The definition of splice time is from the fiber image appeared in LCD monitor to the estimated loss displayed. The average splice time changes depending on the environmental conditions, fiber type, and fiber characteristics.
- *3: Measured at room temperature with the AC adapter. The heat time is defined from the start beep sound to the finish beep sound. The average heat time changes depending on the environmental conditions, sleeve type and battery pack condition
- *4: The electrode life changes depending on the environmental conditions, fiber type and splice modes.
- *5: Test condition
(1) Splice and heat time: 2 minutes cycle
With 16 fiber ribbon and FP-05 sleeve
(2) Using the splicer power save settings
(3) Using a not degraded battery
(4) At room temperature
The battery capacity changes when testing with different conditions from the above.
- *6: The battery capacity halves after approx. 500 discharge and recharge cycles. The battery life is shortened further when using outside of the storage temperature range, operating temperature range, or if completely discharged by storing for a long time without recharging.

Clamp Arm	ARM-CT50-01	Clamp arm with anvil for replacement
Fiber Scrap Collector	FDB-05	Spare scrap collector
Side cover	SC-CT50-01	Side cover instead of scrap collector

Notes

- *1: When the cleave length is from 5 to 10mm, the coating diameter should be 250µm or less. Also, a blade height adjustment is required before cleaving. The average cleave angle is worse than the specification when the cleave length is 5 to 10mm.
- *2: Measured with an interferometer at room temperature, not with a splicer. A new blade was used to cleave both the single fibers and 12 fiber ribbons. The cleave length is set from 10 to 16mm. The average cleave angle changes depending on the environmental conditions, blade condition, operating method, and cleanliness.
- *3: The blade life changes depending on the environmental conditions, operating method, and the fiber type cleaved.
