

# TAKING USER EXPERIENCE TO THE NEXT LEVEL

Innbox customer-premises equipment

Extreme versatility  
of deployment

Top performance  
and reliability

Guaranteed return  
on investment

Iskratel's **Innbox** customer-premises equipment includes home gateways for fibre and copper access, universal home gateways, fibre-termination and RF CATV units.

## INNBOX CPE: PERFORMANCE DELIVERED

Simplicity, innovation and modularity of **Innbox CPE** make supreme user experience come true. They prevent the operator from being just another dumb-pipe provider – instead, they arm them with top performance and reliability at lower costs.

The Innbox CPE family relieves the operators from superfluous helpdesk tickets and help them solve the issues at a fraction of the cost: excelling in monitoring and diagnostics, Innbox CPE enables operators to optimise all settings remotely. Operators report operational savings of **30-to-70 %**.

Armed with centralised **TR-069** auto-configuration system, Innbox CPE can easily and seamlessly integrate with any network-management system.

Iskratel's teams offer expert support, or meet operators' specific needs by customising the Innbox CPE.

## WHAT'S IN THE [INN]BOX?

For optical access, **Innbox G-series** of GPON home gateways delivers an unrivalled subscriber experience. The family spans from first-class **G7x** and **G8x** models to cost-sensitive **G2x** models, ideal for two-box setups.

Data rates up to 10 Gbps come with the NGPON home gateways. The top-of-the-line, feature-rich **Innbox G108** supports XGS-PON and NG-PON2 on a single fibre uplink, while the **Innbox X-series** delivers dedicated XGS-PON connectivity.

For copper access, **Innbox V-series** delivers up to 100 Mbps over VDSL2, supporting VDSL2 vectoring, as well as fallback to ADSL2+. Supreme built-in overvoltage protection is standard.

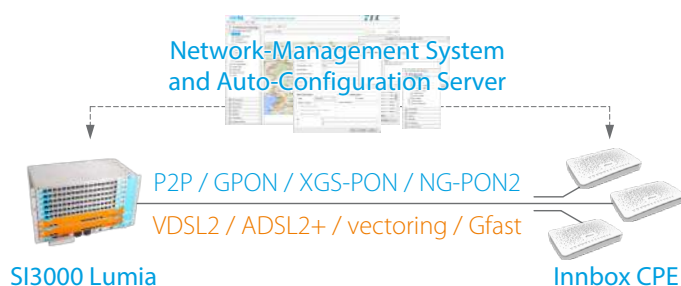

The **Innbox U92** is perfect for cases that (may) require migration between access technologies, with its multiple fibre and copper uplinks in a single universal device.

## TYPICAL DEPLOYMENT SCENARIOS

In a **single-box deployment**, the Innbox home gateway is connected over any of the inherently supported access technologies.

Multi-operator environments (based on bitstream wholesale or unbundling) make **dual-operator, dual-box deployment** appropriate. The first (termination) box is controlled by the network provider, while the service provider's home gateway delivers the networking capabilities. Innbox CPE fit both roles of such deployment.

A **single-operator, dual-box deployment** is applicable to support other access technologies such as radio or satellite. Feature-rich Innbox F-series, V-series, or universal home gateways complement the termination box.

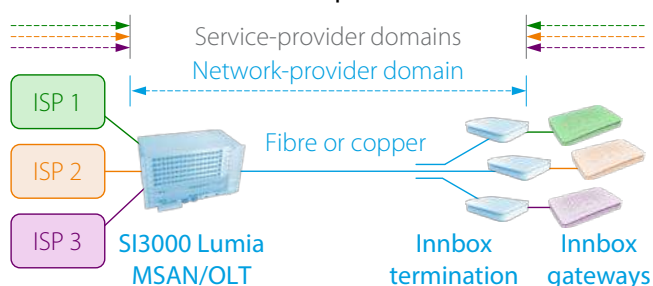

## VDSL2/ADSL2+, ETTH and universal CPE
